

# OUR PRODUCTS MAKE YOUR JOB FASTER & EASIER.

At **Automation-X**, our success is built on delivering more than just technology products. We provide integrated automation solutions to businesses around the globe. We have worked with industry experts and customers for years to maintain a comprehensive product line designed specifically for oil and gas field-level automation. Automation can be complicated, but we make it simple; providing plug and play products and turn-key solutions.

### One-Stop Shopping:

We carry over 4,000 automation products, so that we can meet your needs quickly and efficiently. Our strategically located and stocked warehouses, hot-shot services and knowledgeable sales force are ready to fill your automation needs. Our goal is to make obtaining your automation products simple.

### The Right Products at the Right Price:

We represent only products that have been proven to meet or exceed industry standards. All of our products are field-tested and proven to operate in harsh weather conditions, hot and cold, wet or dry. In order to make your operation run smoothly, we make the process scalable and easy to integrate.

### Promise to our Customers:

Our #1 priority is customer satisfaction. We take the time to meet with our customers frequently and in person, because while we are in the business of automation, we understand that there is no replacement for personal service. Our support team provides a fast response to orders, questions and concerns. We make ordering easy by offering you the options to order onsite with a sales representative, a phone call, or ordering online.

### Technical Services:

We understand that our customers make a big investment in automation. That's why we provide services to maintain and repair essential components. We repair RTU's, transmitters, circuit boards, and sell custom refurbished replacement boards. All repairs go through rigorous testing before being returned to you, ensuring you receive a reliable product that costs you only a fraction compared with purchasing new.

### Manufacturing:

If the right product isn't out there yet, we make it our business to develop and manufacture the products the industry demands.
